CMMC Paused, Not Dead

Navigating the DoW's Phase II Suspension

MEET THE SPEAKER

TIM WEBER, VP OF CHANNEL GROWTH

- Certified as an Information Systems Security Professional (CISSP), Certified Ethical Hacker (CEH) and CMMC-AB Registered Practitioner.
- 25+ years of IT and cybersecurity experience
- Contributor to regional and national publications, including New York Times and NPR
- Tim devotes time sharing his cybersecurity knowledge across the world, speaking at international industry events and conferences.
- Volunteer fire chief and diehard New England Patriots fan.

CYBER74

CMMC BACKGROUND/HISTORY

History

WHAT IS CMMC?

- **Cybersecurity Maturity Model Certification**
- DoD program to enforce cybersecurity across Defense Industrial Base (DIB)
- **REQUIRED** for companies working with or bidding on DoD contracts

TIMELINE

2016 DFARS 7012 launched, requiring NIST 800-171 self-attestation

2020 CMMC 1.0 Released (5 CMMC Levels)

2021 CMMC 2.0 Released (3 CMMC Levels)

2024 Final CMMC Program Rule Published

2025+ Phased rollout of CMMC requirements into DoD contracts begins

CMMC Background

KEY ACRONYMS

OSC Organization Seeking Certification

CUI Controlled Unclassified Information

SPD Security Protection Data

FCI Federal Contract Information

C3PAO Certified Third-Party Assessor

SSP System Security Plan

POA&M Plan of Action & Milestones

CMMC Levels

CMMC 2.0 – THREE LEVELS

Aligned to Protect the Defense Industrial Base

LEVEL 1 FOUNDATIONAL	LEVEL 2 ADVANCED	LEVEL 3 EXPERT
 Protection of Federal Contract Information (FCI)	 Protection of Controlled Unclassified Information (CUI)	 Protection of CUI in High-Priority Programs
✓ Focus: Basic cyber hygiene practices ✓ Based on 17 security requirements from FAR 52.204-21 ✓ Annual self-assessment ✓ No third-party assessment required	✓ Focus: Broader cybersecurity practices aligned to NIST SP 800-171 ✓ Based on 110 security requirements from NIST SP 800-171 ✓ Triennial third-party assessment by a C3PAO ✓ Annual self-assessment in intervening years	✓ Focus: Enhanced cybersecurity practices for critical programs ✓ Based on 110 security requirements from NIST SP 800-171 plus additional requirements from NIST SP 800-172 ✓ Triennial third-party assessment by a C3PAO ✓ Annual self-assessment in intervening years
Applies to contracts that only handle Federal Contract Information	Applies to contracts that handle CUI	Applies to high-priority programs as determined by the DoD

GOAL: Ensure appropriate cybersecurity protections are in place across the Defense Industrial Base based on the sensitivity of the information and the risk to DoD missions.

TIMING (INITIAL)

WHEN DID I NEED TO BE READY BY?

Timing

- **When did companies need to be certified?**
 - Title 48 came out in November 2025 – the start of the program
 - 12 month ramp up period allows for self attestation
 - November 2026 – contracts would begin to include certification requirements

“

*In the end,
the contract is king*

THE ANNOUNCEMENT

WHAT CHANGED AND WHAT DOES IT MEAN?

The Announcement

WHAT HAPPENED

- **DoW suspended CMMC Phase 2 – effective immediately**
- The mandatory third-party (C3PAO) audit requirement, originally set to hit contracts Nov. 10, 2026, is on hold
- Pending Phase 3 and Phase 4 milestones are paused too
- DoW's CIO is standing up a CMMC Reform Task Force for a 60-day review, informed by industry feedback through a public Request for Information
- Stated goal: cut compliance red tape without lowering the cybersecurity bar

July 13, 2026

*DoW announces immediate
suspension of CMMC Phase 2
assessment requirements*
60-day Reform Task Force review now
underway

What Does It Mean?

NO MANDATORY 3RD-PARTY AUDITS

- Level 2 (C3PAO) third-party certification is paused
- New DoW solicitations won't require it while the review is underway

SELF-ASSESSMENT CONTINUES

- DoW keeps enforcing NIST 800-171 through self-assessment
- Select government-led assessments continue as before

THE TIMELINE RESET

- The Nov. 10, 2026 deadline is off the table for now
- A new schedule follows the 60-day review and RFI comment period

What Doesn't Change

STILL IN EFFECT TODAY

- **Phase 1 self-assessment requirements**

- Level 1 and Level 2 (Self) status still apply where required

- **Your DFARS 252.204-7012 obligations**

- Contractually bound to safeguard covered defense information regardless of certification status

- **The NIST SP 800-171 Rev 2 baseline**

- Still the underlying standard your systems and processes must meet

- **Individual contracts**

- Can still write in compliance requirements today, pause or not

“

*The obligations you signed haven't
moved
— only the certification audit has*

Is the Work Wasted?

WHY IT STILL MATTERS

- Certification was designed to validate the NIST 800-171 controls you already have to meet
- SSPs, POA&Ms, CUI/FCI scoping, and enclave work reduce real cyber risk to your plant floor and data – not just paperwork for an auditor
- None of it expires – it carries forward once the review concludes and a certification path returns
- Companies that keep going build a real head start over competitors bidding the same contracts who stop cold

NO

Your groundwork still counts

Recommendations

1 Stay the course – keep implementing NIST 800-171 and completing self-assessments now

2 Keep your SSP and POA&M current – they're living documents, not one-time paperwork

3 Check your contracts – confirm what current and prospective DoW contracts actually require today

4 Engage the review – submit feedback through the RFI, directly or via your industry association

5 Treat this as a head start, not a stop sign – be ready to move fast once Phase 2 resumes
